Application Performance Monitoring | Overview

With Velox's application performance monitoring (APM) solutions, businesses can monitor whether their IT environment meets performance standards, identify bugs and potential issues, and provide flawless user experiences via close monitoring of IT resources. The best APM solutions provide IT teams with the information they need to connect application performance to business outcomes, as well as identify and fix performance issues before they impact the end-user, and in theory, reducing mean time to resolution (MTTR).

In addition to the detection of problems, our comprehensive APM solutions tell you when and where in their journey users are affected and why the problem occurred — for faster and more proactive remediation in the future. This is where APM drives tremendous value for IT teams.

Application Performance Monitoring | Features

- **Observes** application behavior
- Data **Analysis**
- **Fix problems** before they impact the business
- **Monitors CPU Usage**, memory demands and makes sure usage doesn't affect app performance
- **Tracks** how often app **performance** fails
- **Provision** of average response time
- **Cost-effectively** scale your app to meet user demand
- **Measures** how much **traffic** your application receives
- Monitors whether your app is online and available

Velox's APM allows you to easily identify **the why behind the performance**, and that's critical to protecting your resources and your bottom line. For that, you need a holistic approach to APM, and the best way to do that is with a proven solution.
