# ScanPlus® V-Care Backup | Overview

ScanPlus VCare Backup is the process of backing up the operational state, architecture, and stored data of database software. It enables the creation of a duplicate instance or copy of a database in case the primary database crashes, is corrupted, or is lost.

Backup Management Modules such as,

- The full backup name suggests that all data is copied to another location.
- Files & Folder Backup: The selected files will be selected for the backup process, these backups will be stored locally in the system or in the network drive.
- Incremental Backup: Incremental Backup only backs up the information that has changed since the last backup occurred to the system.
- Differential Backup: Differential backup copies all data changed since the last full backup every time it is run over to the system.

# ScanPlus® V-Care Backup | Overview

Data Protection Manager, DPM can backup system state and provide bare metal recovery (BMR) protection. System protection aims to protect you against two scenarios: one where your computer starts, but you have lost system files and registry, and the other where the computer does not start and you have to recover everything. System Center 2012 – Data Protection Manager (DPM) enables you to protect your computer against both these scenarios.

- BMR protection- backs up operating system files and all data except user data on critical volumes. By definition, a BMR backup includes a system state backup.
- System state- backs up operating system files.

# ScanPlus® V-Care Backup | Features

- Backup all your environment
  - Backup unlimited Workstation and Servers on Windows, Mac, Linux.
- Clone/Computer Backup
  - Perform sector-level backup or file-level backup to secure your entire computer, and restore the same to its initial state in the event of a disaster.
- Historical Backups and Multi-Version
  - Vcare Proview historical view of data for time-based recovery and also provides more control over the restoration as multiple file backup is available
- Centralized Management
  - The web-based console helps manage data backups, restores, application settings and more, on remote computers.
- Data Protection
  - Transfer and store files with 256-bit AES encryption using a user-defined key or auto-generated mechanism.

# ScanPlus® V-Care Backup | Features

- Fast-Fast-Fast
  - Incremental and compressed backups will ease network bandwidth by transferring the modified portions of a file.
- Real-Time Data Backup with Optimum usage of storage
  - Detection of modified parts of files and backs them up.
- Anytime Restoration
  - All data available on the cloud can be provisioned for the users to access anywhere at any anytime for restoration.
- Reports
  - Activity reports, backup status reports, share reports - all keep you informed.
- Alert
  - Can be configured for the various alerts in form of Pop up, email, SMS and auto ticketing.

# ScanPlus® V-Care Backup | Benefits

- Parameterized function
  - Functions in the system are highly parameterized.
- Centralized visibility and reporting
  - The system provides an option for a Centralized reporting system and also gives an insight into the solution from the Central location.
- Event and fault management
  - The system gives the option for the user to check for any remediation using Events and fault logs.
- SMS, Email alert, Dashboard, Colour code & Automated
  - Alerts on parameter breach of any observations in the systems will be updated through the Dashboard and alerts like Email, SMS, etc.

# ScanPlus® V-Care Backup | Benefits

- Very cost-effective licensing for lifetime
  - Cost-effective licensing available. We offer perpetual licensing.
- Highly alert sensitive
  - We have developed a system basis our experience in Cyber Security. Our product is highly alert sensitive. They give alerts immediately as per defined parameters.
- User friendly
  - We offer a user-friendly product that is menu-driven and also an option for the user to drill down to get granular level information on records.
- We offer these services through cloud as well
