

ScanPlus[®]-Antivirus

Our ScanPlus Antivirus is a next-generation endpoint security platform designed to protect modern organizations against ransomware, malware, fileless attacks, insider threats, and advanced persistent threats. The solution combines **continuous threat monitoring**, **AI-driven analysis**, **automated containment**, and **centralized security orchestration** to ensure complete protection across all user devices.

Key Capabilities at a Glance

Security Layer	Capabilities
Endpoint Protection	AI-powered malware defense, anti-ransomware, file sandboxing
Threat Detection	Behavioral analytics, anomaly detection, real-time threat intelligence
Data Protection	DLP, media encryption, backup & rollback, policy-driven data controls
Device & Peripherals	USB control, device authentication, offline forensics
Network	IDS/IPS, firewall, DDOS protection, port scan prevention
EDR	Rapid threat search, IoC detection & automated blocking
Enterprise Management	Centralized console, multi-site support, roaming device protection

Core Features

◆ Advanced Endpoint Security

- AI-driven multilayer antivirus and anti-ransomware
- File sandboxing for safe execution of suspicious files
- Protection against fileless and zero-day attacks
- Global threat intelligence & continuous telemetry analysis
- Automatic malware removal, remediation & system rollback

◆ Web & Network Defense

- Phishing & web-browsing protection
- User-level internet policy enforcement
- Google & YouTube access controller
- IDS/IPS, firewall & distributed DDOS protection

◆ Data Security & Governance

- Granular DLP to control sensitive data in motion, use & storage
- Media and USB encryption with customizable access permissions
- Secure data backup with point-in-time recovery options

◆ Device Control & Forensics

- Complete visibility of connected devices
- USB access authorization based on user, device or time
- Offline logging & incident investigation capability
- Centralized inventory of device interaction history

◆ Application & Asset Management

- Application whitelisting & reputation-based allow/block rules
- Endpoint hardware & software inventory
- Automated vulnerability scan & patch recommendation

Endpoint Detection & Response (EDR)

A proactive EDR engine delivers deep visibility across all endpoints, enabling fast threat hunting and response.

- Live endpoint telemetry search
- Automated IoC discovery across network endpoints
- Real-time blocking and isolation of compromised devices
- Evidence collection and timeline reconstruction for investigation

Unified Security Management Console

- Single dashboard to deploy, monitor and manage endpoints
- Role-based administration & centralized reporting
- Policy orchestration for on-premise & roaming users
- Multi-site / multi-tenant scalability for enterprise use

Operational Excellence

Category	Benefits
Deployment	Push installer, remote provisioning, no-touch onboarding
Updates	Cloud-assisted & offline update support
Availability	High-availability (HA) management for mission-critical environments
Support	OEM upgrades, bug-fix releases & subscription-period software version upgrades

Why Organizations Choose This Solution

- Stops ransomware before encryption begins
- Instant containment of compromised endpoints
- Full visibility from a single management console
- Secures corporate & roaming users uniformly
- AI-driven analytics reduce dependency on manual security operations
